Jiawei Zhang

Java / Full-Stack Technical Lead | Head of Engineering

Software engineering since 2017 | Master's degree | Available immediately
zchaw127@gmail.com | hire.jiawis.com
Based in Hangzhou; open to opportunities in Shanghai

PROFILE

- Java-focused engineer combining architecture, hands-on development and delivery, with Python data workflows, Go services and Vue 3 / TypeScript experience across financial services, government, and data / AI platforms.
- Previously Head of Engineering and Technical Partner, leading two product lines and coordinating a platform group of about 20 across engineering, operations and testing. Experience spans transaction consistency, deployment and AI applications, including agent architecture reviews and lab validation.

CORE SKILLS

Backend & Architecture: Java, Spring Boot / Cloud, MyBatis; modular architecture, API design and transaction consistency.

Go Services: Media proxy services and desktop BFF development, code reviews and troubleshooting.

Full-Stack: Vue 3, TypeScript / JavaScript, Node.js, WeChat Mini Programs.

Data & Middleware: MySQL, Oracle, MongoDB, Redis, Kafka / RabbitMQ; queries, caching and async processing.

Python & AI: Data workflows, monitoring, text analysis, model APIs, LangChain, MCP / agent skills.

Engineering Delivery: Docker, Linux, Nginx, k3s, Argo CD / GitOps; offline deployment, rollback and monitoring.

EXPERIENCE

Hangzhou Jinglianwen Technology Co., Ltd. | Head of Engineering
2025.09 - 2026.09

- Led architecture and delivery across two product lines; coordinated a platform group of about 20 in engineering, operations and testing, and contributed to core Java / Vue development.
- Designed task-execution architecture and coordinated Python workflows, CPU / GPU scheduling, model integration, quality gates, monitoring, rollback and on-premises delivery.

JiawisTech Solutions LLC | Technical Partner
2024.02 - 2025.05

- Owned technical design, model selection, prompt design and core Java APIs for AI customer service; coordinated small-team integration and deployment.
- Built Python / LangChain text-analysis workflows; reviewed Shopify frontend performance and developed a prototype using user behavior for recommendations.

Orient Securities | Full-Stack Engineer
2020.03 - 2022.01

- Owned Java migration and integration of order and execution-report messaging, using Kafka / Netty for messaging and real-time push, with Redis locks and state control.
- Developed Python / Vue latency monitoring with ELK log search, visualization and alerts for performance investigation and incident diagnosis.

Linkage Group | Full-Stack Engineer
2017.09 - 2019.07

- Contributed to government property-transaction and smart-city systems; led a five-person team in requirements, design, task allocation and milestone reviews.
- Optimized MySQL queries; implemented RabbitMQ processing and Redis caching. Independently developed an automotive WeChat Mini Program integrating Node.js and Java.

EDUCATION

Marquette University
2022.05 - 2024.01

Master's degree | Computer and Information Science

Jinling College, Nanjing University
2012 - 2016

Bachelor's degree | Journalism | Full-time

Selected Projects

Jiawei Zhang | Platform Architecture · Data Workflows · AI Applications · Delivery

Data & AI Platform / On-Premises Delivery

2025.09 - 2026.09

Architecture & Engineering Lead

Enterprise platform for data management, processing and AI applications, with project collaboration, data versioning, multi-tenancy and on-premises deployment.

- **Platform architecture:** Led modular Java monolith and gateway design, standardized shared components and module integration, and built the Vue 3 / TypeScript frontend foundation.
- **Task scheduling:** Designed MySQL queues with atomic business updates and enqueueing, concurrent claiming, idempotency, Redis heartbeats and resource limits for CPU / GPU workloads.
- **Data workflows:** Coordinated Python processing for thumbnails, transcoding, cleansing, masking, OCR / ASR and pre-annotation; standardized operator input/output contracts and separated computation completion from deliverable readiness.
- **Go services:** Contributed to media proxy services and desktop backend-for-frontend (BFF) development, code reviews and troubleshooting.
- **Data and authorization:** Separated metadata, annotations and file storage; established versioning and lineage, tenant isolation, resource ownership checks and internal-call authentication.
- **Deployment:** Standardized container deployment and GitOps releases with traceability and rollback; completed offline x86 delivery and ARM64 / Kylin adaptation.
- **Agent engineering (lab):** Owned MCP, agent-skill and deterministic-workflow architecture, quality reviews and harness optimization; diagnosed cross-turn tool-visibility and cache-layout issues, and improved loop detection and budget controls.

Stack: Java, Spring Boot, Vue 3, TypeScript, Python, Go, MySQL, Redis, MongoDB, Object Storage, Docker, k3s, Argo CD, MCP

Multi-Model AI Customer Service & Text Analysis

2024.03 - 2025.03

Core Developer

Integrated model APIs for e-commerce customer service and de-identified text analysis, delivering question-answering and analysis workflows and building a user-behavior recommendation prototype.

- **Core development:** Owned Java services, model selection, prompt design and core APIs, integrating conversation context with business interfaces.
- **Python and orchestration:** Used Python / LangChain for model calls and aggregate sentiment analysis of de-identified feedback, with prompt iteration.
- **Delivery:** Coordinated small-team customer-service integration and deployment; reviewed Shopify frontend performance and built a user-behavior recommendation prototype.

Stack: Java, Python, Spring Boot / Spring Cloud, Redis, MongoDB, Docker, Nginx, Model APIs, LangChain

Financial Messaging Migration & Latency Monitoring

2020.03 - 2020.09

Full-Stack Engineer

Contributed to a securities messaging system's C++-to-Java migration, owning order and execution-report module development, cross-system integration and latency monitoring.

- **Module delivery:** Owned Java migration of order and execution-report messaging, coordinating one or two colleagues on development, code reviews and cross-system integration.
- **Messaging:** Used Kafka to consume and distribute order / execution reports and Netty for internal communication and real-time frontend push.
- **State consistency:** Combined Redis locks and an order state machine to handle duplicate submissions, cancellations and concurrent state transitions.
- **Monitoring:** Developed Python / Vue transaction-latency monitoring with ELK log search, visualization and alerts for incident diagnosis.

Stack: Java, Spring Cloud, Kafka, Netty, Redis, Oracle, Python, Vue, ELK
